

# Access Control for Religious Organizations

*Solid Systems for Solid Security*

**Brivo® econtrol Online Access Control™** provides churches and other religious institutions the flexibility in managing access to their doors without requiring a costly infrastructure. With limited IT resources and multiple administrators, the Brivo econtrol Online Access Control provides church leaders with security and administration capabilities that won't break their budget.

- **Eliminate the hassles associated with lock and keys.** Brivo econtrol Online Access Control allows administrators to simply issue and revoke cards and PINs. The hassles of managing keys and re-keying locks are a thing of the past.

- **Eliminate the need to physically unlock doors.** Administrators can create automatic door timers. Church administrators and religious leaders no longer have to be present to open sanctuary doors for services.

- **No network or IT resources required.** With ACS WebService, all software upgrades and system maintenance is performed by Brivo's hosting center and professional service staff.

- **Manage meeting groups and special events easily.** Church Administrators and Religious Leaders can add, change or even delete access credentials on the fly. Remote administration of the system can be done through any Web-browser anywhere in the world, anytime!

- **Maintain the beauty of the sanctuary.** Brivo's wireless control panels eliminate the need of unsightly wiring.

#### What They're Saying ...

"ACS WebService has been working very well and has an extremely easy to use interface. One of the best benefits has been the ability to know who's coming and going and at what times from just about anywhere. Better yet, no more trips to the church to unlock a door for a meeting – just a couple of clicks on my home computer does it!"

— *Brian Barrett, Bethel United Church of Christ Administrator*

"One area ... that I work with on a regular basis is the access control system. Cornerstone recommended Brivo because of the ease of use and ability to change things on the fly as churches often do. The Brivo system allows us to add/delete users, change access levels and modify schedules very quickly from any computer that has a web browser. It even sends text messages to our email and designated cell phones whenever unauthorized users try to access the building."

— *Joe Burns, Littleton Church of Christ Family Life Minister*
