

Access Control for Multi-Site Commercial Offices

Solid Systems for Solid Security

- **One credential for multiple sites.** Brivo's wide-area network architecture links all remote sites together in one seamless system with any combination of cellular wireless or broadband control panels. A single individual needs only one credential to enter multiple sites.
- **Distributed security, centralized control.** Brivo's centrally hosted platform provides electronic access control to all remote sites under one Web-based system, as well as redundant archiving of account data at a secure, professionally managed location.
- **Increase control of contractor activity.** Brivo® econtrol Online Access Control™ allows managers to dynamically assign credentials to expire after a contract is over and maintain a digital record of all system events involving contractors.
- **Eliminate key management hassles.** When staff members or maintenance personnel leave, Brivo econtrol Online Access Control allows managers to simply revoke cards and PINs, rendering the hassles of managing keys and re-keying locks a thing of the past.
- **Heighten access visibility.** Brivo sends immediate notifications of incidents and keeps a digital record of system events available to managers in a secure, online account.
- **Control access to high value assets.** Computer rooms, inventory, shipping and receiving, cash offices and customer records are protected by ACS WebService.
- **No IT personnel or expertise required.** Because the ACS WebService application and database are hosted at a central hosting center, there is no need for dedicated PC's or software. All IT functions and maintenance are managed professionally by Brivo. This means there is no IT requirement for the end-user.
