

Access Control for Education Facilities

Solid Systems for Solid Security

ACS WebService™ provides secure environments for educational facilities.

ACS WebService provides an economical and practical method for ensuring high security of students and trainees while maintaining an open learning environment.

- **Easily manage student turnover.** Administrators can automatically assign credentials to expire after semesters and immediately revoke access across all facilities and doors.
- **Central administration, single card for multiple sites.** Brivo's wide-area wireless architecture links all classrooms, floors and buildings together in one seamless system with no additional networking required. Faculty and personnel need only one credential to access multiple sites.
- **Eliminate key management hassles.** When faculty members or maintenance personnel terminate their association, Brivo® allows administrators to simply revoke cards and PINs. This means the hassles of managing keys and re-keying locks are a thing of the past.
- **Improve student safety.** Brivo® econtrol Online Access Control™ provides immediate incident notification via email, phone or pager. A digital record of all system events is also available in the school's online account.
- **Enhance service, provide after-hours access.** Schools can provide students after-hours access to laboratories and research areas without the need to dispense keys or to employ guard services.
- **Eliminate the burden of IT hassles.** The Brivo ACS WebService solution means that no on-site PC's or servers are required and no software needs to be installed. All IT functions and maintenance are managed by Brivo. This means there is no IT requirement for the school.
